DAVID ARINZE

BACKEND ENGINEER | DISTRIBUTED SYSTEMS | FINTECH & ENTERPRISE INTEGRATIONS

Ajah, Lagos, Nigeria | +234 703 361 0060 | devportfoliyos@gmail.com | LinkedIn: David Arinze | GitHub: Profanor

PROFESSIONAL SUMMARY

Software Engineer experienced in building and maintaining Node.js and NestJS services with TypeScript, PostgreSQL, and Redis across fintech, gaming, property, and other platform workflows. Hands-on experience with REST APIs, gRPC microservices, payment-provider and identity-verification integrations, transaction processing, financial reconciliation, tenant-scoped data access, authentication, Docker-based delivery, CI/CD, and production troubleshooting. Focused on reliable services, maintainable architecture, and secure data handling.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Bash

Backend & APIs: Node.js, NestJS, Express.js, REST APIs, gRPC, Protocol Buffers, WebSockets, DTO validation

Frontend: React, Next.js, Tailwind CSS, shadcn/ui, Redux Toolkit Query

Data: PostgreSQL, MySQL, MongoDB, Redis, SQLite, Prisma ORM, TypeORM; schema design, indexing, migrations

Architecture & security: Modular services, microservices, event-driven concepts, JWT authentication, authorization, API security, tenant-scoped data access

Delivery & operations: Docker, Git, GitHub Actions, CI/CD, structured logging, metrics, health checks, production debugging

Cloud & AI: AWS (working knowledge), Kubernetes (familiarity), OpenAI API/LLM integration, modular AI workflows

PROFESSIONAL EXPERIENCE

BullAfric International | *Core Backend Engineer | Remote, Contract | Jan 2026 – Jun 2026*

- Contributed to restructuring a legacy fintech platform into a modular NestJS architecture, improving feature delivery speed by 30%.
- Designed and implemented wallet infrastructure covering multi-country KYC workflows, payment-provider integrations, transaction lifecycles, and financial reconciliation.
- Implemented location-aware KYC routing and payload normalization to support consistent, auditable verification workflows.
- Introduced backend standards for DTO validation, service isolation, and unit testing.
- Investigated production transaction failures using structured logs, database state, and provider integrations to help restore payment operations.

Lordwin Group | *Backend Engineer | Lagos, Hybrid | Jan 2025 – Present*

- Design and maintain gRPC-based distributed microservices supporting financial and gaming platforms, with attention to service reliability and low-latency communication.
- Build and maintain NestJS APIs using Redis and PostgreSQL to support service integration and data consistency.
- Implemented Docker- and GitHub Actions CI/CD workflows to streamline application releases.
- Improve operational observability through structured logging, service metrics, health checks and production troubleshooting.

Santos Estate Limited | *Full-Stack Developer | Remote, Contract | Oct 2025 – Mar 2026*

- Designed the application architecture and built a NestJS backend with Prisma, modular services, secure APIs, and property/document workflows.
- Developed a React and Tailwind CSS interface integrated with authentication, property management, and document endpoints.
- Implemented document upload, metadata capture, validation, and management flows.

Eulav | *Backend Engineer | Remote, Contract | Apr 2025 – Jun 2025*

- Integrated Dojah APIs for NIN/BVN identity verification.
- Migrated legacy MySQL data into structured, indexed schemas with Prisma ORM, removing redundant records and improving query performance.
- Standardized Docker-based service containerization and supported movement toward a microservices architecture.

GuruSystems Technology | *Full-Stack Developer | Remote, Contract | Aug 2024 – Jun 2025*

- Built NestJS REST APIs and integrated JWT authentication.
- Migrated frontend architecture from Adonis.js and Inertia.js to Next.js.
- Integrated third-party APIs and maintained frontend workflows using Chakra UI and Redux Toolkit Query.

Axxon Network Inc | *Game Backend Engineer | Remote | Apr 2024 – Sep 2024*

- Built REST APIs and WebSocket services for secure, low-latency communication between game clients and backend services.
- Designed data models for player profiles, game progress, in-game items, and leaderboards.
- Optimized backend performance, improving concurrent-player handling and reducing response latency by 25%.

Decagon Institute | *Software Engineer | Lagos | Oct 2023 – Mar 2024*

- Built full-stack applications using Node.js, React, and TypeScript with an emphasis on clean architecture and test-driven design.

- Optimized database queries through indexing, improving API response times by 20%.
- Collaborated in Agile sprints and peer reviews to improve code quality and delivery.

SELECTED PROJECTS

EvPay — Fintech Application

Built the core backend during my engagement with BullAfric International (Jan–Jun 2026), supporting wallet infrastructure, transaction processing, payment-provider integrations, reconciliation, and KYC workflows. Built with NestJS, TypeScript, PostgreSQL, and Redis. The application is available on Google Play and the Apple App Store.

Deltaline — Multi-tenant Logistics Application

Contributed to a logistics platform serving multiple independent organizations and partners. Implemented backend access controls that scoped data access to the relevant organization or partner, enforcing tenant-level data isolation across Partner, Agility, Customer, Terminal, and Lucky Draw modules.

CodeWarden — AI Development Assistant

Building an AI-powered backend assistant using NestJS and OpenAI APIs. Organized the codebase into LLM, agent, and memory components. Technologies: NestJS, TypeScript, OpenAI API, Redis, PostgreSQL, Docker, REST.

Project-LOS Game API Server

Developed a game-server API with authorization for selected testers and game clients, supporting secure communication and real-time interactions. Technologies: Node.js, Express, TypeScript, MongoDB, JWT, WebSockets.

EDUCATION, CERTIFICATIONS & PUBLICATION

B.Sc. Computer Science | University of Nigeria, Nsukka | 2021

J.P. Morgan Software Engineering Virtual Experience | Scrum Fundamentals Certified (SFC)

“From Game Servers to Fintech: Relearning Software Engineering” — Medium

Professional Development: Linux Fundamentals (in progress)
